ROTOR RUSH

OFFICIAL PARTICIPANT RULEBOOK

OUTDOOR DRONE RACING COMPETITION

1. Event details

Item	Details
Event	ROTOR RUSH
Dates	12 and 13 November 2026
Venue	Global Academy of Technology, Bengaluru
Team size	Exactly 2 members per team
Team roles	Each team must identify one pilot and one spotter for each race.

2. Drone specifications

Participants must bring and operate their own drones. The following limits apply to all participants:

Specification	Requirement
Frame size	Maximum 450 mm (diagonal motor-to-motor measurement)
Battery	Up to 6S maximum
Propellers	Maximum 7 inches
Drone ownership	Each team must bring its own drone.
Inspection	Officials may inspect drones and batteries before a run. Equipment that does not meet the specifications or is considered unsafe may be held out of the competition.

Battery safety: Use batteries only within the manufacturer's ratings. Inspect battery packs before use and follow event staff instructions for handling, charging and storage.

3. Competition procedure

1. Teams must report when called and identify their pilot and spotter to the officials.

2. The pilot may start only after receiving authorization from the judge or Race Director and the official start signal.

3. The track layout, flight boundaries and start/finish procedure will be explained before the run.

4. The drone must follow the marked course in the prescribed order and direction.

5. The timer starts on the official start signal and stops when the drone completes the course and reaches the designated finish condition, as confirmed by the judge.

6. Only one team's drone may use the active course at a time, unless officials announce a different heat format.

4. General flight and course rules

1. Fly only when your team is called and the judge authorizes the start.

2. Do not launch before the official start signal. A false start may result in a warning or penalty as decided by the Race Director.

3. Follow the course in the specified order. Do not intentionally bypass a required track section or obstacle.

4. Do not intentionally collide with, damage, move or alter any obstacle or course equipment.

5. No physical assistance or touching the drone is permitted while the run is active.

6. Do not enter the active flight area or retrieve a drone until the safety official says it is safe.

7. Stop immediately when instructed by a safety official or the Race Director.

8. Do not obstruct another pilot, interfere with another drone, or behave in a way that compromises safety or fair competition.

5. Time and penalty system

The competition is decided by adjusted completion time. Penalties are added to the recorded flight time in seconds.

Violation	Penalty
Missing a track section / required obstacle	+5 seconds per missed section
Touching an obstacle	+10 seconds per contact

Adjusted time = recorded completion time + total penalty seconds.

Example: A recorded time of 60 seconds, one missed section (+5 seconds) and one obstacle touch (+10 seconds) results in an adjusted time of 75 seconds.

A run that is not completed, or is stopped for an unsafe act, may be classified as DNF or disqualified by the Race Director.

6. Winner and tie-break

THE TEAM WITH THE LOWEST ADJUSTED COMPLETION TIME WINS.

If two or more teams have the same adjusted completion time, the Race Director will apply the tie-break procedure announced during the event briefing.

7. Safety and equipment incidents

1. Safety of participants, officials, spectators and property takes priority over completing a run.
2. The designated safety official or Race Director may stop a flight at any time if it becomes unsafe.
3. Keep spectators and non-essential personnel outside the marked flight area and behind the designated safety boundary.
4. No person may enter the active flight area while a drone is armed or in flight, except when directed by the safety official.
5. Participants are responsible for their own drones, batteries and personal belongings. Follow all event safety instructions.

8. Results and disputes

Judges record completion times and penalties. Teams should check their recorded result when an opportunity is provided. Any concern about timing or penalty entries must be raised respectfully with the judge or Race Director before results are declared final. The Race Director's decisions on safety, course completion and event procedure are final.

9. Event-day checklist

- ■ Bring your own drone and compatible controller.
- ■ Ensure the frame size, battery and propellers comply with the specifications.
- ■ Bring valid student ID, if required by the organisers.
- ■ Bring batteries in safe condition and follow staff instructions.
- ■ Arrive before your scheduled check-in or briefing and be ready when your team is called.

SAFETY FIRST • FOLLOW THE BRIEFING • FLY ONLY WITH OFFICIAL AUTHORIZATION
